

ROBUST WORKFORCE PIPELINE TO FILL HIGH GROWTH POSITIONS

The Nashville Chamber of Commerce, and its partners at the Middle Tennessee Regional Workforce Alliance, reached out to CAEL to get a more detailed understanding of career pathways within two key industry sectors: Manufacturing and Information Technology. CAEL worked with industry leaders to map job families within both sectors as well as all the possible career progression connections within and across job families including additional educational requirements and typical years of experience. In the short term, this raw career pathway information served as an advising tool for workforce and education providers as they work with job seekers and students. Ultimately, this content will function as the foundation for a CAEL interactive Career Action Platform which the Nashville Chamber is actively working to get funded.

Nashville has been blessed to experience significant growth within the regional economy; but in order to maintain that growth we needed to make sure we were aligning messaging around the biggest career opportunities. CAEL has been a great thought leader, strategist and facilitator in working with our industries to get to the core of what they need and how we communicate that to our residents.”
